EJ KIM

(929) 365-3832 | ejk483@nyu.edu | New York, NY | https://ejkim1996.github.io | https://github.com/ejkim1996

EDUCATION

New York University, Bachelor's in Computer Science   **Fall 2015 – May 2019**
New York, NY   *Cumulative GPA: 3.9*

SKILLS

- **Languages: (*proficient*)** Python, JavaScript, HTML, CSS (***intermediate***) Java, C#, SQL (***novice***) C
- **Frameworks:** React, Redux, Django, Kubernetes, Docker, Node, Express
- **Tools:** Git, GitHub, PostgreSQL, MongoDB, REDIS, AWS, GCP, RabbitMQ

EXPERIENCE

Behold.ai Technologies Inc.   **July 2019 – Present**
Software Engineer
- Decreased loading times of CT scans (often with **300+** images per scan) by **70%** by loading images in smaller batches to display them as they load in and by preloading CT scans of the next study.
- Maintain and optimize internal web-based medical image viewer which uses **React + Redux** on the front-end and **Django**, **PostgreSQL**, **Redis**, **AWS, GCP,** and **MongoDB** in the backend.
- Refactor and maintain **microservices** using **RabbitMQ** within the company's ecosystem to ensure data pipelines are up to date with new features and are efficient for image processing.
- Handle deployments to alpha and production systems using **Docker** and **Kubernetes**, ensuring consistent uptimes and smooth transitioning.

American Museum of Natural History   **Sept 2016 – May 2019**
Software Development Intern
- Developed 2D and 3D interactive exhibits using **Unity** and **C#** (including Neural Pathways for *Our Senses,* Undersea Exploration for *Unseen Oceans*) at the American Museum of Natural History, which has **5 million** visitors annually.
- Ensured exhibits could be independently operated by **450+** daily visitors (including families with children) for indefinite periods of time by rigorously testing exhibits against unexpected inputs.

PROJECTS

Facetime for Remote Photoshoots   **Spring 2020**
MongoDB, Express, React Native, Node, RabbitMQ
- Side project with friends to make an app in **React Native** using the **MERN** stack, optimized for remote photoshoots.
- Responsible for setting up the core backend **microservices** using **RabbitMQ** and **Redis** to support low-latency features required for the React Native app.

Tutoring Center Schedule Creator   **Spring 2019**
Google Cloud Firestore, Node.js, Express.js, React.js
- Conceived, designed, and developed a project to produce a weekly schedule for every course offered at the tutoring center at NYU; reduced the time it took to create the schedule from **3** days to **30** minutes by automating a manual task.
- Obtained shift schedules of **70** tutors, each of whom tutor **10–20** courses, by using the Google Calendar API and implemented an interval merging algorithm for sorted time intervals that runs in O(N) time and O(1) space.

Companion App for The Resistance: Avalon   **Fall 2018**
MongoDB, Socket.io, Validate.js, Bootstrap, Passport.js
- Created a mobile-friendly real-time web app using **Node.js/Express** that provides relevant info to players based on the character they got assigned and allows quest tracking. It supports multiple games at a time, each with 6–10 people.
- Incorporated persistent data storage by using **MongoDB** to store user account, game, quest, and character info, and provided authentication using **Passport.js** through the Google OAuth2 protocol.
